Wear self-contained breathing apparatus for firefighting if necessary.

SECTION 6: Accidental release measures

Personal precautions, protective equipment and emergency procedures

Avoid dust formation. Avoid breathing mist, gas or vapours. Avoid contacting with skin and eye. Use personal protective equipment. Wear chemical impermeable gloves. Ensure adequate ventilation. Remove all sources of ignition. Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak.

Environmental precautions

Prevent further spillage or leakage if it is safe to do so. Do not let the chemical enter drains. Discharge into the environment must be avoided.

Methods and materials for containment and cleaning up

Collect and arrange disposal. Keep the chemical in suitable and closed containers for disposal. Remove all sources of ignition. Use spark-proof tools and explosion-proof equipment. Adhered or collected material should be promptly disposed of, in accordance with appropriate laws and regulations.

SECTION 7: Handling and storage

Precautions for safe handling

Handling in a well ventilated place. Wear suitable protective clothing. Avoid contact with skin and eyes. Avoid formation of dust and aerosols. Use non-sparking tools. Prevent fire caused by electrostatic discharge steam.

Conditions for safe storage, including any incompatibilities

Store the container tightly closed in a dry, cool and well-ventilated place. Store apart from foodstuff containers or incompatible materials.

Persistence and degradability

1-Chloroanthraquinone (100 mg/l), inoculated with activated sludge, had a theoretical BOD of 2.8% after a two week period(1). This suggests that 1-chloroanthraquinone may be resistant to biodegradation(1).

Bioaccumulative potential

Experimental BCF values of 118-351 were measured using carp(1). An estimated BCF value of 630 was calculated for 1-chloroanthraquinone(SRC), using an estimated log Kow of 3.99(2,SRC) and a recommended regression-derived equation(3). These BCF values suggest that 1-chloroanthraquinone may bioconcentrate in aquatic organisms(SRC).

Mobility in soil

Based on an estimated log Kow of 3.99(1,SRC), the Koc of 1-chloroanthraquinone is estimated as approximately 3500(SRC) using a regression-derived equation(2). According to a suggested classification scheme(3), this estimated Koc value suggests that 1-chloroanthraquinone will have only slight mobility in soil(SRC).

Other adverse effects

no data available

SECTION 13: Disposal considerations

Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
