**Persistence and degradability**

Cell-free extracts of *Flavobacterium* sp isolated from soil degraded 2,3-dibromopropanol to epibromohydrin, dihydroxybromopropane, glycidol, and ultimately glycerin(1,2).

**Bioaccumulative potential**

An estimated BCF of 3 was calculated for 2,3-dibromopropanol(SRC), using an estimated log Kow of 0.96(1,SRC) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is low.

**Mobility in soil**

Using a structure estimation method based on molecular connectivity indices(1), the Koc for 2,3-dibromopropanol can be estimated to be about 4(SRC). According to a classification scheme(2), this estimated Koc value suggests that 2,3-dibromopropanol is expected to have very high mobility in soil.

#### **Other adverse effects**

### **SECTION 13: Disposal considerations**

#### **Disposal methods**

##### **Product**

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

##### **Contaminated packaging**

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
