Following ingestion

Rinse mouth with water. Do not induce vomiting. Never give anything by mouth to an unconscious person. Call a doctor or Poison Control Center immediately.

Most important symptoms/effects, acute and delayed

no data available

Indication of immediate medical attention and special treatment needed, if necessary

Immediate first aid: Ensure that adequate decontamination has been carried out. If patient is not breathing, start artificial respiration, preferably with a demand-valve resuscitator, bag-valve-mask device, or pocket mask, as trained. Perform CPR as necessary. Immediately flush contaminated eyes with gently flowing water. Do not induce vomiting. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration. Keep patient quiet and maintain normal body temperature. Obtain medical attention. Thiabendazoles and related compounds

Persistence and degradability

AEROBIC: The half-life of etridiazole in a silt loam (laboratory study) at 25 deg C was 9.5 days under aerobic conditions and 3 days under anaerobic conditions(1). The half-life in a sandy clay loam (field study) was 7 days(1).

Bioaccumulative potential

A whole body BCF for etridiazole in bluegill (*Lepomis macrochirus*) exposed for 28 days was 193(1). Other reported BCFs for etridiazole were 94 in edible fish tissues, 328 in viscera, and 193 in whole fish(2). Depuration was rapid, at 50% one day after ending exposure(2). According to a classification scheme(3), these BCFs suggest bioconcentration in aquatic organisms is high(SRC).

Mobility in soil

Koc values of 349 and 323 were reported in sandy loam and silt loam, respectively(1). According to a classification scheme(2), these Koc values suggest that etridiazole is expected to have moderate mobility in soil.

Other adverse effects

no data available

SECTION 13: Disposal considerations

Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
