Persistence and degradability

AEROBIC: Butyl glycolyl butyl phthalate at an initial concentration of 1 mg/L underwent approximately 95% biodegradation in 2 days under aerobic conditions in Mississippi River water. When 5, 20, 100 and 200 mg per 24 hr butyl glycolyl butyl phthalate was added to a semi-continuous activated sludge apparatus, it underwent >99% biodegradation under aerobic conditions(1,2). Butyl glycolyl butyl phthalate underwent 84.5% biodegradation in a semi-continuous activated sludge test under aerobic conditions in 24 hrs, and complete degradation was observed in three days in an activated sludge die-away test(3).

Bioaccumulative potential

An estimated BCF of 300 was calculated in fish for butyl glycolyl butyl phthalate(SRC), using an estimated log Kow of 4.15(1) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is high(SRC). However, bioconcentration studies on compounds which are structurally similar suggest that bioconcentration may be lower than that indicated by the regression-derived equations due to the ability of aquatic organisms to readily metabolize this class of compounds(4).

Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc of butyl glycolyl butyl phthalate can be estimated to be 1.5×10^4 (SRC). According to a classification scheme(2), this estimated Koc value suggests that butyl glycolyl butyl phthalate is expected to be immobile in soil.

Other adverse effects

no data available

SECTION 13: Disposal considerations

Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
