

Chemical Safety Data Sheet MSDS / SDS

Carbofuran SDS

Revision Date:2024-04-25 Revision Number:1

Section 1	Section 2	Section 3	Section 4	Section 5	Section 6	Section 7	Section 8
Section 9	Section 10	Section 11	Section 12	Section 13	Section 14	Section 15	Section 16

SECTION 1: Identification of the substance/mixture and of the company/undertaking**Product identifier**

Product name: Carbofuran
CAS: 1563-66-2

Relevant identified uses of the substance or mixture and uses advised against

Relevant identified uses: For R&D use only. Not for medicinal, household or other use.
Uses advised against: none

Company Identification

Company: Chemicalbook.in
Address: 5 vasavi Layout Basaveswara Nilayam Pragathi Nagar Hyderabad, India -500090
Telephone: +91 9550333722

SECTION 2: Hazards identification**Classification of the substance or mixture**

Acute toxicity - Category 2, Oral
Acute toxicity - Category 2, Inhalation

Hazardous to the aquatic environment, short-term (Acute) - Category Acute 1
Hazardous to the aquatic environment, long-term (Chronic) - Category Chronic 1

GHS label elements, including precautionary statements

Pictogram(s)

Signal word

Danger

Hazard statement(s)

H300 Fatal if swallowed
H330 Fatal if inhaled
H410 Very toxic to aquatic life with long lasting effects

Precautionary statement(s)

Prevention

P264 Wash ... thoroughly after handling.
P270 Do not eat, drink or smoke when using this product.
P260 Do not breathe dust/fume/gas/mist/vapours/spray.
P271 Use only outdoors or in a well-ventilated area.
P284 [In case of inadequate ventilation] wear respiratory protection.
P273 Avoid release to the environment.

Response

P301+P316 IF SWALLOWED: Get emergency medical help immediately.
P321 Specific treatment (see ... on this label).
P330 Rinse mouth.
P304+P340 IF INHALED: Remove person to fresh air and keep comfortable for breathing.
P316 Get emergency medical help immediately.
P320 Specific treatment is urgent (see ... on this label).
P391 Collect spillage.

Storage

P405 Store locked up.
P403+P233 Store in a well-ventilated place. Keep container tightly closed.

Disposal

P501 Dispose of contents/container to an appropriate treatment and disposal facility in accordance with applicable laws and regulations, and product characteristics at time of disposal.

Other hazards which do not result in classification

no data available

SECTION 3: Composition/information on ingredients

Substance

Chemical name:	Carbofuran
Common names and synonyms:	Carbofuran
CAS number:	1563-66-2
EC number:	216-353-0
Concentration:	100%

SECTION 4: First aid measures

Description of necessary first-aid measures

If inhaled

Fresh air, rest. Artificial respiration may be needed. Refer for medical attention. See Notes.

Following skin contact

Remove contaminated clothes. Rinse and then wash skin with water and soap.

Following eye contact

First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then refer for medical attention.

Following ingestion

Give a slurry of activated charcoal in water to drink. Refer for medical attention . See Notes.

Most important symptoms/effects, acute and delayed

This material is extremely poisonous. May be fatal if swallowed, inhaled, or absorbed through skin. Contact may burn skin or eyes. Probable lethal oral dose to humans 5 to 50 mg/kg or 7 drops to 1 teaspoon for 150 lb. person. (EPA, 1998)

Indication of immediate medical attention and special treatment needed, if necessary

Immediate first aid: Ensure that adequate decontamination has been carried out. If patient is not breathing, start artificial respiration, preferably with a demand-valve resuscitator, bag-valve-mask device, or pocket mask, as trained. Perform CPR as necessary. Immediately flush contaminated eyes with gently flowing water. Do not induce vomiting. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration. Keep patient quiet and maintain normal body temperature. Obtain medical attention. Carbamates and related compounds

SECTION 5: Firefighting measures

Suitable extinguishing media

If material on fire or involved in fire: Do not extinguish fire unless flow can be stopped. Use water in flooding quantities as fog. Cool all affected containers with flooding quantities of water. Apply water from as far a distance as possible. Solid streams of water may be ineffective. Use foam, dry chemical or carbon dioxide. Carbofuran (Carbamate pesticides, liquid, toxic)

Specific hazards arising from the chemical

May release nitrogen oxides. Containers may explode in heat of fire. Avoid alkalies. Stable under neutral or acid conditions. (EPA, 1998)

Special protective actions for fire-fighters

In case of fire in the surroundings, use appropriate extinguishing media.

SECTION 6: Accidental release measures

Personal precautions, protective equipment and emergency procedures

Personal protection: self-contained breathing apparatus. Do NOT let this chemical enter the environment. Sweep spilled substance into covered containers. If appropriate, moisten first to prevent dusting. Carefully collect remainder. Then store and dispose of according to local regulations.

Environmental precautions

Personal protection: self-contained breathing apparatus. Do NOT let this chemical enter the environment. Sweep spilled substance

into covered containers. If appropriate, moisten first to prevent dusting. Carefully collect remainder. Then store and dispose of according to local regulations.

Methods and materials for containment and cleaning up

Treatment techniques which may be effective in removing carbofuran from drinking water: include adsorption on granular activated carbon (GAC) or powdered activated carbon (PAC), reverse osmosis (RO), and oxidation by ozone, or ozone/ultraviolet.

SECTION 7: Handling and storage

Precautions for safe handling

Handling in a well ventilated place. Wear suitable protective clothing. Avoid contact with skin and eyes. Avoid formation of dust and aerosols. Use non-sparking tools. Prevent fire caused by electrostatic discharge steam.

Conditions for safe storage, including any incompatibilities

Provision to contain effluent from fire extinguishing. Separated from food and feedstuffs. Keep in a well-ventilated room. Separated from food and feedstuffs. Keep in a well-ventilated room.

SECTION 8: Exposure controls/personal protection

Control parameters

Occupational Exposure limit values

TLV: 0.1 mg/m³, as TWA; A4 (not classifiable as a human carcinogen); BEI issued

Biological limit values

no data available

Appropriate engineering controls

Ensure adequate ventilation. Handle in accordance with good industrial hygiene and safety practice. Set up emergency exits and the risk-elimination area.

Individual protection measures, such as personal protective equipment (PPE)

Eye/face protection

Wear safety spectacles or eye protection in combination with breathing protection.

Skin protection

Protective gloves.

Respiratory protection

Use ventilation (not if powder), local exhaust or breathing protection.

Thermal hazards

no data available

SECTION 9: Physical and chemical properties and safety characteristics

Physical state:	Carbofuran is an odorless white crystalline solid. Contact with skin may burn skin and eyes. When exposed to heat or flames it may emit toxic oxides of nitrogen. It is toxic by inhalation, skin contact, and/ or ingestion. It is used as a pesticide.
Colour:	White, crystalline solid
Odour:	Odorless
Melting point/freezing point:	153-154°C
Boiling point or initial boiling point and boiling range:	200°C
Flammability:	Noncombustible Solid
Lower and upper explosion limit/flammability limit:	no data available
Flash point:	143.3°C
Auto-ignition temperature:	no data available

Decomposition temperature:	150°C
pH:	no data available
Kinematic viscosity:	no data available
Solubility:	0.07 % at 77° F (NIOSH, 2016)
Partition coefficient n-octanol/water:	log Kow = 2.32
Vapour pressure:	0.000502mmHg at 25°C
Density and/or relative density:	1.18
Relative vapour density:	no data available
Particle characteristics:	no data available

SECTION 10: Stability and reactivity

Reactivity

Decomposes on heating. This produces toxic fumes including nitrogen oxides.

Chemical stability

Stable under neutral or acid conditions, unstable in alkaline media

Possibility of hazardous reactions

CARBOFURAN is a carbamate ester. Carbamates are chemically similar to, but more reactive than amides. Like amides they form polymers such as polyurethane resins. Carbamates are incompatible with strong acids and bases, and especially incompatible with strong reducing agents such as hydrides. Flammable gaseous hydrogen is produced by the combination of active metals or nitrides with carbamates. Strongly oxidizing acids, peroxides, and hydroperoxides are incompatible with carbamates. This compound is unstable in an alkaline media. (NTP, 1992).

Conditions to avoid

no data available

Incompatible materials

Alkaline substances, acid, strong oxidizers (e.g., perchlorates, peroxides, chlorates, nitrates, permanganates).

Hazardous decomposition products

When heated to decomposition it emits toxic fumes of /nitrogen oxides/.

SECTION 11: Toxicological information**Acute toxicity**

Oral: LD50 Guinea pig oral 9.18 mg/kg

Inhalation: LC50 Guinea pig inhalation 43 mg/cu m/4 Hr

Dermal: LD50 Rabbit percutaneous 2550 mg/kg Active ingredient as wettable powder

Skin corrosion/irritation

no data available

Serious eye damage/irritation

no data available

Respiratory or skin sensitization

no data available

Germ cell mutagenicity

no data available

Carcinogenicity

Cancer Classification: Not Likely to be Carcinogenic to Humans

Reproductive toxicity

no data available

STOT-single exposure

The substance may cause effects on the nervous system. This may result in convulsions and respiratory depression. Cholinesterase inhibition. The effects may be delayed. Exposure could cause death. Medical observation is indicated.

STOT-repeated exposure

Cholinesterase inhibition. Cumulative effects are possible. See Acute Hazards/Symptoms.

Aspiration hazard

Evaporation at 20°C is negligible; a harmful concentration of airborne particles can, however, be reached quickly on spraying or when dispersed, especially if powdered.

SECTION 12: Ecological information

Toxicity

Toxicity to fish: LC50; Species: *Salmo trutta* (Brown trout) weight 0.5 g; Conditions: static bioassay, 12 deg C; Concentration: 560 ug/L for 96 hr (95% confidence limit 475-660 ug/L) /Technical material, 99%

Toxicity to daphnia and other aquatic invertebrates: EC50; Species: *Daphnia magna* (water flea); Condition: static; Concentration: 29 ug/L for 48 hr; Effect: immobilization

Toxicity to algae: EC50; Species: *Microcystis aeruginosa* (Blue-Green Algae) grown in HGZ media; Conditions: freshwater, static, 24 deg C; Concentration: 4649.7 ug/L for 96 hr; Effect: decreased population biomass /98% purity

Toxicity to microorganisms: no data available

Persistence and degradability

AEROBIC: Under laboratory conditions and 8 weeks of incubation, 77% of applied carbofuran remained in sterile muck while only 25% remained in non-sterile muck; 50% remained in sterile loam while none remained in non-sterile loam(1). The rate of CO₂ release two weeks after incubating a vineyard soil with carbofuran was 40 times greater than when the soil had been autoclaved(2). Carbofuran was rapidly lost from cornfield soils both with and without a history of carbofuran use, but virtually no loss was observed when the soil was autoclaved(3). The main metabolite of carbofuran in soil is 3-ketocarbofuran; small amounts of 3-hydroxycarbofuran, carbofuran phenol, and 3-ketocarbofuran phenol were also present(4). The dominant fate of the carbonyl

group of carbofuran, once added to non-history soils, is hydrolysis of the carbamate bond followed by rapid mineralization of the methylamine(5). Non-sterile samples exhibited a lag phase followed by a period of rapid hydrolysis; the reaction is essentially complete after 14 days with CO₂ production from 77.6-100% of the added labeled carbofuran(5). A half-life of 8-10 days was determined for carbofuran in paddy soils. In pond water, a biodegradation half-life of 2 days was reported for early rice and 5-6 days for late rice treated with carbofuran(6). Carbofuran dissipation from paddy water was rapid with an estimated dissipation time for 50% initial concentration (DT₅₀) of 3 days and a DT₉₅ of 13 days; the DT₅₀ from paddy soil was about 10 days and the DT₉₅ was 42 days; dissipation was due to both hydrolysis and biodegradation(7).

Bioaccumulative potential

A BCF for carbofuran of 117 was measured using *Tilapia nilotica* which were exposed over a 30-day period(1). According to a classification scheme(2), this BCF suggests bioconcentration in aquatic organisms is high(SRC), provided the compound is not metabolized by the organism(SRC).

Mobility in soil

The Koc of carbofuran was studied in 43 surface soils (0-15 cm) from Sri Lanka, 28 soils were from the wet zone, 15 from the dry zone, Koc values ranged from 7.3 to 120.6 with a mean and median of 41.65 and 36.1, respectively(1). The Koc range of 8 European soils was determined to be 48.6 to 110.0(2). Carbofuran had an average Koc of 105 measured in three soils with an organic content ranging from 0.68 to 2.01%(3). A mean Koc value of 29.4 was determined for 5 different soils(4). Based on measured R_f values, carbofuran was found to be mobile to very mobile in sandy soil, sandy loam, silty clay, and silty loam soil, moderately mobile in silty clay and silty clay loam soil, and only slightly mobile in muck soil(5). Koc values ranging from 24 to 123 were determined for sand, sandy loam, creek sediment, and an organic soil(6). According to a recommended classification scheme(7), these measured Koc values indicate that carbofuran has very high to high mobility in soil(SRC). Laboratory studies found carbofuran leached through soil, but tests in a corn field found that carbofuran traveled only to a depth of 7.5 cm over 22 weeks which included periods of heavy rain; the formulated product was found to leach less than the technical product(8). Carbofuran adsorbed more strongly to red loam soil than sandy loam soil with adsorption due to organic matter and clay content of the soil(9). Carbofuran was detected in agricultural drain water from a rice growing area at a total of 1.72-11.03% during a 54-80 day period after flooding(10).

Other adverse effects

no data available

SECTION 13: Disposal considerations

Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.

SECTION 14: Transport information

UN Number

ADR/RID: UN2992 (For reference only, please check.)

IMDG: UN2992 (For reference only, please check.)

IATA: UN2992 (For reference only, please check.)

UN Proper Shipping Name

ADR/RID: CARBAMATE PESTICIDE, LIQUID, TOXIC (For reference only, please check.)

IMDG: CARBAMATE PESTICIDE, LIQUID, TOXIC (For reference only, please check.)

IATA: CARBAMATE PESTICIDE, LIQUID, TOXIC (For reference only, please check.)

Transport hazard class(es)

ADR/RID: 6.1 (For reference only, please check.)

IMDG: 6.1 (For reference only, please check.)

IATA: 6.1 (For reference only, please check.)

Packing group, if applicable

ADR/RID: I (For reference only, please check.)

IMDG: I (For reference only, please check.)

IATA: I (For reference only, please check.)

Environmental hazards

ADR/RID: Yes

IMDG: Yes

IATA: Yes

Special precautions for user

no data available

Transport in bulk according to IMO instruments

no data available

SECTION 15: Regulatory information

Safety, health and environmental regulations specific for the product in question

European Inventory of Existing Commercial Chemical Substances (EINECS)

Listed.

EC Inventory

Listed.

United States Toxic Substances Control Act (TSCA) Inventory

Listed.

China Catalog of Hazardous chemicals 2015

Listed.

New Zealand Inventory of Chemicals (NZIoC)

Listed.

(PICCS)

Listed.

Vietnam National Chemical Inventory

Listed.

IECSC)

Listed.

Korea Existing Chemicals List (KECL)

Listed.

SECTION 16: Other information

Abbreviations and acronyms

CAS: Chemical Abstracts Service

ADR: European Agreement concerning the International Carriage of Dangerous Goods by Road

RID: Regulation concerning the International Carriage of Dangerous Goods by Rail

IMDG: International Maritime Dangerous Goods

IATA: International Air Transportation Association

TWA: Time Weighted Average

STEL: Short term exposure limit

LC50: Lethal Concentration 50%

LD50: Lethal Dose 50%

EC50: Effective Concentration 50%

Other Information

Specific treatment is necessary in case of poisoning with this substance; the appropriate means with instructions must be available. Do NOT take working clothes home. Carrier solvents used in commercial formulations may change physical and toxicological properties. If the substance is formulated with solvents also consult the ICSCs of these materials.
