SECTION 6: Accidental release measures

Personal precautions, protective equipment and emergency procedures

Avoid dust formation. Avoid breathing mist, gas or vapours. Avoid contacting with skin and eye. Use personal protective equipment. Wear chemical impermeable gloves. Ensure adequate ventilation. Remove all sources of ignition. Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak.

Environmental precautions

Prevent further spillage or leakage if it is safe to do so. Do not let the chemical enter drains. Discharge into the environment must be avoided.

Methods and materials for containment and cleaning up

Collect and arrange disposal. Keep the chemical in suitable and closed containers for disposal. Remove all sources of ignition. Use spark-proof tools and explosion-proof equipment. Adhered or collected material should be promptly disposed of, in accordance with appropriate laws and regulations.

SECTION 7: Handling and storage

Precautions for safe handling

Handling in a well ventilated place. Wear suitable protective clothing. Avoid contact with skin and eyes. Avoid formation of dust and aerosols. Use non-sparking tools. Prevent fire caused by electrostatic discharge steam.

Conditions for safe storage, including any incompatibilities

Store the container tightly closed in a dry, cool and well-ventilated place. Store apart from foodstuff containers or incompatible materials.

Bioaccumulative potential

An estimated BCF of 3 was calculated for chloroacetic anhydride(SRC), using an estimated log Kow of -0.07(1,SRC) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is low. Bioconcentration is unlikely to occur due to an estimated base-catalyzed second-order hydrolysis rate constant of 1.9×10^5 L/mole-sec(SRC) which corresponds to half-lives of 37 and 4 seconds at pH values of 7 and 8, respectively(4).

Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc for chloroacetic anhydride can be

estimated to be 3(SRC). According to a classification scheme(2), this estimated Koc value suggests that chloroacetic anhydride is expected to have very high mobility. An estimated base-catalyzed second-order hydrolysis rate constant of 1.9×10^5 L/mole-sec(SRC) which corresponds to half-lives of 37 and 4 seconds at pH values of 7 and 8, respectively(3) will make it unlikely for chloroacetic anhydride to be mobile.

Other adverse effects

no data available

SECTION 13: Disposal considerations

Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
