**Persistence and degradability**

Dichlofluanid, added to a sandy loam and a silt loam was lost due to mineralization of this compound(1).

**Bioaccumulative potential**

An estimated BCF value of 70 was calculated for dichlofluanid(SRC), using an estimated log Kow of 2.72(1,SRC) and a recommended regression-derived equation(2). According to a recommended classification scheme(3), this BCF value suggests that bioconcentration in aquatic organisms may be an important fate process(SRC).

**Mobility in soil**

Using a structure estimation method based on molecular connectivity indices(1), the Koc for dichlofluanid can be estimated to be about 1100(SRC). According to a recommended classification scheme(2), this estimated Koc value suggests that dichlofluanid has low mobility in soil(SRC). Dichlofluanid added to a sandy loam and a silt loam was found mainly in the 0-10 cm soil layers of both

soils during a three year period(3).

#### **Other adverse effects**

no data available

### **SECTION 13: Disposal considerations**

#### **Disposal methods**

#### **Product**

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

#### **Contaminated packaging**

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
