### **Persistence and degradability**

AEROBIC: The average half-life of tolylfluanid in soil has been reported as 2 days(1). The half-life of tolylfluanid in water has been reported as less than 14 days(1).

### **Bioaccumulative potential**

An estimated BCF of 540 was calculated for tolylfluanid(SRC), using a log Kow of 3.90(1) and a regression-derived equation(2).

According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is high(SRC), provided the compound is not altered physically or chemically once released into the environment.

#### **Mobility in soil**

The Koc of tolylfluanid is estimated as 3200(SRC), using a log Kow of 3.90(1) and a regression-derived equation(2). According to a classification scheme(3), this estimated Koc value suggests that tolylfluanid is expected to have slight mobility in soil.

#### **Other adverse effects**

no data available

### **SECTION 13: Disposal considerations**

#### **Disposal methods**

##### **Product**

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

##### **Contaminated packaging**

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
