**Persistence and degradability**

**AEROBIC:** Biodegradation is the ultimate fate of quaternary ammonium compounds (QACs) released to wastewater treatment and the environment(1). Reported biodegradation measurements of QACs have varied from 0-100%, but some reported values may not distinguish between actual biodegradation, sorption and complexation mechanisms(1). One reported MITI test determined tetradecylbenzyltrimethylammonium chloride degradation to be 83% after 10 days(2), but the same source reported only 0-5% degradation for the similar hexadecyl- and octadecyl-dimethylammonium chlorides(2). A decyl-, dodecyl- and tetradecylbenzyltrimethylammonium chloride mixture, present at 100 mg/L, reached 0% of its theoretical BOD in 4 weeks using an activated sludge inoculum at 30 mg/L and the Japanese MITI test(3). Greater than 70% removal of 20 mg/L

tetradecylbenzyltrimethylammonium chloride was observed using a continuous-flow activated sludge system in a wastewater treatment plant(1). Acclimation may be a major factor that influences biodegradation of QACs(1).

#### **Bioaccumulative potential**

BCF ranges of <0.2-5.9 at 0.5 mg/L and <1.8-8.6 at 0.05 mg/L were measured in fish for a decyl-, dodecyl- and tetradecylbenzyltrimethylammonium chloride mixture(1) using carp (*Cyprinus carpio*) which were exposed over a 6-week period(1). According to a classification scheme(2), these BCF ranges suggest the potential for bioconcentration in aquatic organisms is low(SRC).

#### **Mobility in soil**

Using a structure estimation method based on molecular connectivity indices(1), the Koc for tetradecylbenzyltrimethylammonium chloride can be estimated to be  $9 \times 10^5$ (SRC). According to a classification scheme(2), this estimated Koc value suggests that tetradecylbenzyltrimethylammonium chloride is expected to be immobile in soil.

#### **Other adverse effects**

no data available

### **SECTION 13: Disposal considerations**

#### **Disposal methods**

#### **Product**

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

#### **Contaminated packaging**

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
