## SECTION 10: Stability and reactivity

### Reactivity

Deliquescent. Water soluble.

### Chemical stability

no data available

### **Possibility of hazardous reactions**

Palladium catalysts/ ... should be filtered from catalytic hydrogenation reaction mixtures carefully. Recovered catalyst is usually saturated with hydrogen & highly reactive & ... will enflame spontaneously on exposure to air. Particularly in large-scale reactions, the filter cake should not be allowed to become dry. Funnel containing the still-moist catalyst filter cake should be put into a water bath immediately after completion of filtration. /palladium catalysts/PALLADIUM CHLORIDE is a weak oxidizing agent. It is reduced in solution by hydrogen or carbon monoxide to metallic palladium. (NTP, 1992). Decomposed at high temperatures to metallic palladium and chlorine.
