### **Persistence and degradability**

A two-week biodegradation study using 30 mg/l sludge and a phenetole concentration of 100 mg/l gave a theoretical BOD of 63%(1). Using an electrolytic respirometer, phenetole had a theoretical BOD of 52-69% after a lag of 130-150 hours(2).

### **Bioaccumulative potential**

An estimated BCF value of 48 was calculated for phenetole(SRC), using an experimental log Kow of 2.51(1) and a recommended regression-derived equation(2). According to a classification scheme(3), this BCF value suggests that bioconcentration in aquatic organisms may be moderate, not high(SRC).

### **Mobility in soil**

The Koc of phenetole is estimated as approximately 550(SRC), using an experimental log Kow of 2.51(1) and a regression-derived equation(2,SRC). According to a recommended classification scheme(3), this estimated Koc value suggests that phenetole has low mobility in soil(SRC).

### **Other adverse effects**

no data available

## **SECTION 13: Disposal considerations**

### **Disposal methods**

#### **Product**

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

#### **Contaminated packaging**

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
